

Security and Compliance Immersion Day

What is the Security and Compliance Immersion Day?

A Security and Compliance Day is a customizable AWS experience delivered by solutions architects and account managers. The goal of the security and compliance immersion day is to help customers understand security on AWS.

Benefits of the Security and Compliance Immersion Day

The security and compliance immersion day is a good mechanism to engage with security stakeholders in a customer, especially if they are new to AWS. For SAs, the Security and Compliance Day provides pre-created modules and labs that can be delivered to the customer without rework.

Modules | Core

AWS Shared Responsibility Model and Security Foundations

A discussion of the AWS Shared Responsibility Model, distinguishing between demarcation lines for different Service types, and covering relevant security publications

- Infrastructure, Container and Abstract Services
- Lines of responsibility demarcation
- Audit responsibilities
- AWS physical security
- and more...

Identity best practices on AWS

What are best practices for IAM on AWS?

- Discussion - IAM Options
- Lab - AWS Console, CloudTrail and Config
- Discussion - IAM Policies
- Lab - Working with IAM roles and Policies
- Lab - Let us see what we did - CloudTrail Review
- and more...

Best of the best practices

What does a bad day on AWS look like and how can you have a good day?

- AWS Best Practices
- Real world example
- Where to find best practices
- and more...

This workshop includes hands-on labs on the main topics covered.
